

# COVID-19 Testing at Home

## A Story about What to Expect During the Mobile Testing Swab

by Shannon Sousa, MS, CCC-SLP of Community Autism Resources

COVID-19, or Coronavirus, is a virus that is spreading very quickly and making some people sick. Testing for COVID-19 helps to keep us healthy.

If myself, a staff member, or somebody in my house is sick, my house manager will help everybody in the house get tested.

Fallon Ambulance will come to the house. There will not be a siren or lights because this is not an emergency.

Two healthcare workers will test me right at our house. They will knock on the door. We don't know exactly when they will come so we should try to be ready.

The healthcare workers will be wearing a mask, gloves, gown, and face shield. The healthcare workers see lots of patients, so they need to protect everybody from germs.

They will do the testing in my house or the ambulance. Everybody will be tested. The healthcare workers are quick and efficient.

The test for COVID-19 is called a nasopharyngeal swab. The swab looks like a long Q-tip. It comes in a plastic container that keeps it clean.

The swab traps germs to check if I have COVID-19.

The healthcare worker will ask me to blow my nose so that my nostrils are clear.

I will tip my head back. The healthcare worker will gently push the swab into my nose.

The test does not hurt. The swab might feel uncomfortable because I am not used to having things in my nose. My eyes might water. I will be okay.

During the test, I breathe through my mouth and try to be calm. I can think of happy and fun thoughts.

The swab will touch the back of my throat through my nose. This is where COVID-19 germs live. The germs stick to the swab when the healthcare worker twists it.

The COVID-19 test is quick. The healthcare worker will pull out the swab and seal it in a bag.

My swab will be sent to a lab for testing. Scientists will look at the germs and see if I have COVID-19.

It will take a few days to find out if I have COVID-19.  
It is normal to have a runny nose after the test.

While I wait, I still need to practice social distancing, washing my hands, and taking care of myself.

By getting a swab test, I am helping to keep myself and others healthy. We are working together to stop the virus. Together we are doing a great job.
